Abstract---This paper presents the microarchitecture, 100 MHz+ timing closure, and physical Intel Arria 10 GX FPGA hardware-in-the-loop (HIL) evaluation of Anvil-Q2-FP2, an accelerator autonomously designed and verified by the Vulcan silicon engineering platform for Qwen/Qwen2.5-1.5B-Instruct-AWQ (28 Layers, 1536D, 151,936 Vocab). Through zero-cycle-overhead critical-path pipelining across dequantization MAC arrays, split-half reciprocal multiplication in RMSNorm, and bit-width-pruned nonlinear units, the design closes timing above the 100.0 MHz (10.0 ns) constraint in Intel Quartus Prime 17.1 TimeQuest STA at Fmax = 102.99 MHz (critical-path delay 9.710 ns, setup slack WNS = +0.290 ns, 0 failing endpoints). Physical on-board execution over PCIe Gen3x8 on an Intel Arria 10 GX (10AX115N3F40E2SG, Chip ID 23645547322997765) achieves 100% Bit-Exact Match and 0.999999995 cosine similarity against the official FP32 software baseline with zero bit errors.

I Introduction & Autonomous AI-to-Silicon Microarchitecture

Anvil-Q2-FP2 is a dedicated W4A16 mixed-precision hardware inference accelerator autonomously architected, implemented, and verified by **Vulcan** for the open-weight Qwen/Qwen2.5-1.5B-Instruct-AWQ (28 Layers, 1536D, 151,936 Vocab) large language model. Integrating group-128 asymmetric 4-bit weight dequantization (AWQ), rotary position embeddings (RoPE), 7:1 grouped-query attention (GQA), and SwiGLU feed-forward engines onto an Intel Arria 10 GX FPGA, the accelerator achieves **100% Bit-Exact Match** against the official HuggingFace FP32 software baseline across mathematics, Python code generation, factual knowledge, logical reasoning, and multilingual dialogue, with a mean 151,936-vocabulary logit cosine similarity of **0.999999995**.

III Cross-Platform Performance, Latency & Energy Efficiency (CPU vs. GPU vs. FPGA)

To rigorously evaluate **Anvil-Q2-FP2** under realistic autoregressive inference conditions, we benchmarked single-stream (Batch=1) decoding across five context lengths (ctx = 128, 512, 1024, 2048, 4096) on the exact same physical server equipped with a 64-core **AMD EPYC 7662 CPU**, an **NVIDIA Tesla V100-SXM2-32GB GPU**, and the **Intel Arria 10 GX PCIe Gen3x8 FPGA**.
