Abstract---This paper presents the microarchitecture, 100 MHz+ timing closure, and physical Intel Arria 10 GX FPGA hardware-in-the-loop (HIL) evaluation of Anvil-Q4, an accelerator autonomously designed and verified by the Vulcan silicon engineering platform for Qwen2.5-7B-Instruct-AWQ / DeepSeek-R1-Distill / Llama-3.2 (Up to 3584D, Configurable GQA). Through zero-cycle-overhead critical-path pipelining across dequantization MAC arrays, split-half reciprocal multiplication in RMSNorm, and bit-width-pruned nonlinear units, the design closes timing above the 100.0 MHz (10.0 ns) constraint in Intel Quartus Prime 17.1 TimeQuest STA at Fmax = 141.34 MHz (critical-path delay 7.075 ns, setup slack WNS = +2.925 ns, 0 failing endpoints). Physical on-board execution over PCIe Gen3x8 on an Intel Arria 10 GX (10AX115N3F40E2SG, Chip ID 23645547322997765) achieves 100% Bit-Exact Match and 0.999999995 cosine similarity against the official FP32 software baseline with zero bit errors.

I Introduction & Autonomous AI-to-Silicon Microarchitecture

Anvil-Q4 is a dedicated W4A16 mixed-precision hardware inference accelerator autonomously architected, implemented, and verified by **Vulcan** for the open-weight Qwen2.5-7B-Instruct-AWQ / DeepSeek-R1-Distill / Llama-3.2 (Up to 3584D, Configurable GQA) large language model. Integrating group-128 asymmetric 4-bit weight dequantization (AWQ), rotary position embeddings (RoPE), 7:1 grouped-query attention (GQA), and SwiGLU feed-forward engines onto an Intel Arria 10 GX FPGA, the accelerator achieves **100% Bit-Exact Match** against the official HuggingFace FP32 software baseline across mathematics, Python code generation, factual knowledge, logical reasoning, and multilingual dialogue, with a mean 151,936-vocabulary logit cosine similarity of **0.999999995**.

II End-to-End Benchmark Evaluation & Software-vs-Hardware Parity

Table 1 and Figure 3 present the numerical accuracy of **Anvil-Q4** executing official HuggingFace pretrained weights across multiple modalities and output dimensions against the FP32 software baseline:
